Dissertation: Leibniz on Location

Committee: Jeffrey K. McDonough, Alison J. Simmons, Samuel S. Levey

Short Abstract: Commonsense says space determines our place and relatedly, our point of view. Leibniz argues that commonsense puts the cart before the horse twice. First, rather than explaining place in terms of space, Leibniz explains space in terms of place, building space bottom-up from places. Second, Leibniz holds that our point of view determines where we are in space; Ruth is in Paris because she has a Parisian point of view. Leibniz’s claims admittedly sound odd. But I argue they pave the way for a picture that delivers three striking results. First, all it takes to have a place is to have a point of view. Second, souls and more generally, monads have places. Third, there are measurable distances between souls.
